

Inner tubes for buoy ITLA/ITLB

Instructions for use and maintenance:

- Use the ITL inner tubes only in combination with original buoy APNEAUTIC Large. Inflate the inner tube with your mouth so the buoy is nicely filled and has a nice shape with sufficient internal volume. Do not, however, overinflate it.
- Check carefully the inner tube and the buoy before every use and in case of found defect that can result in decreased safety, stop using the buoy and send it to qualified service.
- Do not put any sharp things into the internal storage of the buoy as there is a great risk of damaging the inner tube which may lead to immediate loss of buoyancy. That may have fatal consequences!
- After use, always rinse it with clean water and let it dry in a well-ventilated place out of a direct sunlight.
- If it is necessary to leave the buoy under the direct sunlight, deflate the inner tube a little bit so the internal pressure of the buoy decreases.
- Store the buoy inflated (if possible) in dry and dark place.
