

Weight strap for a buoy

Instructions for use and maintenance:

- Select the required load, arrange it in a row and then put the desired number of lead through the first slot and then through the other one. Then, take the free end of the strip and put it through the buckle and then through bottom slot of the buckle so the buckle gets “locked”.
- Take a stainless steel carbine and attach the strap under the bottom plate.
- After use, always rinse it with clean water and let it dry in a well-ventilated place.
- Store it in a dry and dark place.
