

Nose Clip Transparent

Instructions for use and maintenance:

- Do not put NC on greasy nose! (Sunscreens etc.)
- Moisten the contact surfaces (pads) before putting the NC on the nose.
- Find the best NC position and tighten as desired.
- Do not take the NC of your nose before opening the sliding parts of NC.
- The string can be easily taken off the NC. Hydrodynamic will, therefore, improve which may be helpful in achieving maximum performances in both training and DYN/DNF competitions.
- After use, always rinse with clean water. NC should not stay wet for a long time so it does not get moldy.
- Put it back to the box after drying in a well-ventilated place.
