

The Buoy Large

Instructions for use and maintenance:

- Use the buoy only in combination with original inner tube APNEAUTIC IT2. Inflate it with your mouth so the tube is filled nicely with the air, has a nice shape and sufficient internal volume. Do not overinflate it unless necessary.
- We recommend using a telescopic flag in order to indicate the diving site in all places (not just where the boat traffic is increased)!
- Check carefully the inner tube and the buoy before every use and in case of found defect that can result in decreased safety, stop using the buoy and send it to qualified service.
- Do not put any sharp things into the internal storage of the buoy as there is a great risk of damaging the inner tube which may lead to immediate loss of buoyancy. That may have fatal consequences!
- Always attach the rope to the stainless steel mesh. Also use this mesh for berthing and connecting ropes. Never use the side straps and the handles for these purposes!
- Despite large buoyancy do not unnecessarily overload the buoy. Recommended load placed at the end of the rope should be between 6 and 14 kg depending on the training.
- After use, always rinse it with clean water and let it dry in a well-ventilated place out of a direct sunlight.
- Store the buoy inflated (if possible) in dry and dark place.
